About Me

Hello, I'm Oleksii, developer with almost 10 years of full time working experience with PHP stack. I'm also good at developing frontend with React and microservices with Golang/NodeJS.

I like bringing more value to users and money to the business. More than 7 years of experience at unicorn company and developing my own things that were used and paid by people around the world.

Open-source contributor.
Entrepreneurial mindset, high-tech skills
Every successful company is basically a recruitment company. So, please, be fully committed to reading my CV, taking into account how much value I could bring to your business or customer.

Full-Time Work Experience

Software Engineer at airSlate

May 2017 - Oct 2024 - 7 years, 6 months

Unicorn company from Boston with largest R&D in Ukraine that provides a platform for automating business processes / document-signature solutions currently operating 5 products.

Started working at airSlate product pdfFiller.

From May 2017 worked on the new "SendToSign" version for pdfFiller + supporting existing features.

Learned: A/B testing, deployments with minimizing risks of breaking things, teamwork, continuous improvement based on the customer feedback.

In 2018 - switched to new product "airSlate" in a team that was developing microservice like Google Forms using PHP.

Had an experience of interactions between a lot of microservices, working in constantly changing environment of brand-new product, active involvement within the team processes.

Learned: building products from scratch, interacting in early structure organisation, taking responsibility for the team.

In 2020 Worked on new features for "SendToSign" in SignNow + bugfixes.

Learned: sprint planning, better Agile organization, unit&integration testing, enterprise-like PHP/Laravel approach, building a public API.

From 2021 to nowadays responsible for backend for mobile. Handling the request from mobile developers, developing new features and designing the solutions for problems with mobile clients.

Widely using Laravel and its components, NodeJS and closely collaborating with the frontend.

Learned: mobile-backend interaction, backend reliability for the mobile devices, building new services in enterprise-like organisational structure.

Full Stack Engineer at ADPHONE International

Dec, 2016 - May 2017 - 6 mos

Product that offering mass placement of adverts in the catalogs. Integration with cell operators for advertising and adverts websites for placements.

PHP, Yii, PostgreSQL, NodeJS.

Learned: working in startup with little resources, building the system with huge amount of integrations, working for a local market on a 3rd world country.

Full Stack Engineer at APU Idea

Jul, 2016 - Dec 2016 - 6 mos

Development platform for Ukrainian public procurement system using PHP(Kohana), MySQL, HTML, CSS, JS, jQuery.

Worked in team of 3 developers. Integrating with API of Ukrainian public procurement system, aligning with the government standards.

Learned: working in a company highly tied to governmental API, developing product according to the governmental specification

Full Stack Engineer at WEBKITCHEN DESIGN

Remote

Feb, 2016 - Jul, 2016 - 7 mos

Web-design studio mostly focused on work with the local clients. A lot of work with HTML/CSS markups + WordPress integration.

Custom WordPress functionality using PHP, JS, jQuery. Completed few websites for the clients.

Learned: developing the websites for a small business, creating HTML/CSS layouts

Full Stack Engineer From-ua

Remote

Oct, 2014 - Jan, 2016 - 1 year, 4 months

Got my first job after doing some freelance work of developing the website for searching jobs in Poland.

Then I was in charge of support and new features.

I've used PHP+Kohana framework, MySQL, HTML, CSS, JS, jQuery, WordPress (used for news websites apart from the main project).

In the end I've completed the website that had functionality of creating positions, CVs and applying for positions.

Learned: creating the website from scratch, being fully in charge of both Front and Back parts

Own Projects

Obtained unique experience through working on projects on my own or with a self-founded small teams in a free time.

For sure, I can use that talent to boost your business.

Solo founder [ABRouter](#)

Dec, 2021 - Present

Open-source tool for running A/B tests. Take a look on [GitHub](#) or [website](#).

Learned: demos for B2B, creating the clients for different programming languages, marketing for developer-oriented product.

Solo founder [ProxiedMail](#)

Jan, 2020 - Present

Project I've created as an alternative to Firefox relay to bring it to other platforms.

With ProxiedMail you can generate endless emails hosted at your or their domains with forwarding to your real email.

Product use case is privacy protection, spam protection, email migration between providers, using custom domains in a better and cheaper way, and smart emailing features like a webhook or API.

Got into top-10 of the day on ProductHunt

Website: proxiedmail.com

Github: <https://github.com/proxied-mail>

Learned: customer support for geeks, building redundancy with limited resources, product pivots, marketing in a competitive market, fraud prevention, supporting public API.

Solo founder [MeetSometimes](#)

July, 2023 - Sep 2023 - 2 months

Social project that bringing strangers together at the dinner.

Anyone who want to meet just purchasing a ticket and then we're organizing a dinner for them in groups of 5 people.

I've organized 3 dinners with 30 people in total from Instagram advertising.

Closed down due to competition and lack of energy for that amount of communication, but it was nice to try and close it down with return on advertisement investment, but not my time.

[Instagram](#)

Learned: communication&customer support for people with different language than English, Portuguese culture of communication specifics, validating the hypothesis and going forward.

Solo founder [Graphica.io](#)

Aug, 2017 - Nov 2020 - 3 years, 3 months

Started as a first product just to train my skills and try new things.

Initially tried to build Instagram Analytics, but eventually end up building Instagram Story Saver - tool that was automatically saving Instagram Stories of selected accounts to the Dropbox.

Achieved \$10K ARR right before Meta requested to close it down.

Most of the traffic was coming from SEO. Clients from around the world.

Learned: working with B2B and B2C clients, customer support, using reverse-engineered API (never again)

Education
